Test item description: Thermoelectric Cooler

Trade Mark: SmartCube Automated, SmartCube Classic Non-Automated

Manufacturer....: Same as applicant Model/Type reference: DC40T, SDC40T

Factory...... Guangdong Candor Intelligent Technology Co., Ltd.

No. 41, Xingye North Road, Nantou Town, Zhongshan,

Guangdong, China

Ratings: 220 - 240 V; 50 Hz; See marking plate

General remarks:

The test results presented in this report relate only to the object tested,

This report shall not be reproduced, except in full, without the written approval of the Issuing testing laboratory.

"(see Enclosure #)" refers to additional information appended to the report,

"(see appended table)" refers to a table appended to the report,

Throughout this report a comma is used as the decimal separator,

This document is issued by the company under its General Conditions of Service accessible at http://www,sgs,com/terms and conditions, htm, Attention is drawn to the limitation of liability, indemnification and jurisdiction issues defined therein,

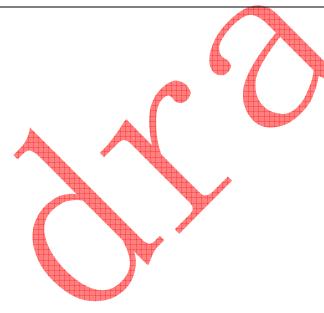

Any holder of this document is advised that information contained hereon reflects the Company's findings at the time of its intervention only and within the limits of Client's instructions, if any, The Company's sole responsibility is to its Client and this document does not exonerate parties to a transaction from exercising all their rights and obligations under the transaction documents, Any unauthorized alteration, forgery or falsification of the content or appearance of this document is unlawful and offenders may be prosecuted to the fullest extent of the law,

Unless otherwise stated: (a) the results shown in this document refer only to the sample(s) tested and (b) such sample(s) are retained for 3 months, this document cannot be reproduced except in full, without prior approval of the company,

General product information:

Thermoelectric Cooler appliance is fitted with a pantry compartment.

Two models are same except the control panel.

COMMISSION DELEGATED REGULATION (EU) No 2019/2016			
CI	Requirement-Test	Result-Remark	Verdict
(a)	for refrigerating appliances with anti-condensation heaters that can be switched on and off by the enduser, the anti-condensation heaters shall be switched on and — if adjustable — set at maximum heating and included in the annual energy consumption (AE) as daily energy consumption (Edaily);		N/A
(b)	for refrigerating appliances with ambient controlled anti-condensation heaters, the ambient controlled electric anti-condensation heaters shall be switched off or otherwise disabled, where possible, during the measurement of energy consumption;		N/A
(c)	for refrigerating appliances with dispensers that can be switched on and off by the end-user, the dispensers shall be switched on during the energy consumption test but not operating;		N/A
(d)	for the measurement of energy consumption, variable temperature compartments shall operate at the lowest temperature that can be set by the enduser to continuously maintain the temperature range, as set out in Table 3, of the compartment type which has the lowest temperature;		N/A
(e)	for refrigerating appliances that can be connected to a network, the communication module shall be activated but there is no need to have a specific type of communication or data exchange or both during the energy consumption test, buring the energy consumption test it has to be ensured that the unit is connected to a network.		N/A
(f)	for the performance of chill compartments:		_
	(1) for a variable temperature compartment rated as a fresh food and/or chill compartment, the energy efficiency index (EEI) shall be determined for each temperature condition and the highest value shall be applied;		N/A
	(2) a chill compartment shall be able to control its average temperature within a certain range without user-adjustments of its control, this can be verified during the energy consumption tests at 16 °C and 32 °C ambient temperature;		N/A
(g)	for adjustable volume compartments, when the volumes of two compartments are adjustable relative to one another by the end-user, the energy consumption and the volume shall be tested when the volume of the compartment with the higher target temperature is adjusted to its minimum volume.		N/A
(h)	the freezing capacity of a compartment is calculated as 24 times the light load weight of that compartment, divided by the freezing time to bring the temperature of the light load from +25 to – 18 °C at an ambient temperature of 25 °C expressed in kg/24h and rounded to one decimal place;		N/A

Page 7 of 28 Report No.: GZEE250700370731

tor 4-star compartments, the freezing time to bring the temperature of the light load from +25 to — 18 °C at an ambient temperature of 25 °C shall be such that the resulting freezing capacity complies with the requirement in Annex I, point 4 (i) for the determination of the climate classes, the acronym for the ambient temperature range, that is SN, N, ST or T: (i) The extended temperate (SN) has a temperature range from 10 °C to 32 °C; (2) The temperate (IN) has a temperature range from 16 °C to 32 °C; (3) The subtropical (ST) has a temperature range from 16 °C to 33 °C; and (4) The tropical (T) has a temperature range from 16 °C to 38 °C; and (4) The tropical (T) has a temperature range from 16 °C to 43 °C; (b) the light load weight for each 4-star compartment shall be: — 3.5 kg/100 I of the volume of the 4-star compartment evaluated, rounded up to the nearest 0.5 kg, and — 2 kg for a 4-star compartment with a volume for which 3.5 kg/100 I leads to a value lower than 2 kg; in the case that the refrigerating appliance includes a combination of 3- and 4-star compartments, the sum of the light load weights shall be igerelead so that the sum of the light load weights shall be igerelead so that the sum of the light load weights for all the 4-star compartments shall be: — 3.5 kg/100 I of the total volume of all 4-and 3-star compartments shall be: — 3.5 kg/100 I of the total volume of all 4-and 3-star compartments shall be: — 3.5 kg/100 I of the total volume of all 4-and 3-star compartments shall be: — 1 kg for a total volume of all 4-and 3-star compartments for which 3.5 kg/100 I leads to a value lower than 2 kg. 2 Stora a conditions and larget temperatures per compartment type: Table 3 sets ut the storage conditions and target temperatures per compartment type. Table 3 sets ut the storage conditions and target temperatures per defining at an arbitral temperature of 16 °C and 32 °C. To determine the energy consumption, the average air temperatures in each compartment type claimed by the supplier, Values a		COMMISSION DELEGATED REGULATION	N (EU) No 2019/2016	00700070701
the temperature of the light load from +25 to — 18 °C at an ambient temperature of 25 °C shall be such that the resulting freezing capacity complies with the requirement in Annex I, point 4 (i) for the determination of the climate classes, the acronym for the ambient temperature range, that is SN, N, ST or T: (1) The extended temperate (SN) has a temperature range from 10 °C to 32 °C; (2) The temperate (N) has a temperature range from 16 °C to 32 °C; (3) The subtropical (ST) has a temperature range from 16 °C to 32 °C; (3) The subtropical (ST) has a temperature range from 16 °C to 38 °C; and (4) The tropical (T) has a temperature range from 16 °C to 43 °C; (b) the light load weight for each 4-star compartment shall be: — 3.5 kg/100 I of the volume of the 4-star compartment shall be: — 3.5 kg/100 I leads to a value lower than 2 kg; in the case that the refrigerating appliance includes a combination of 3- and 4-star compartments, the sum of the light load weights shall be increased so that the sum of the light load weights shall be increased so that the sum of the light load weights shall be increased so that the sum of the light load weights shall be increased so that the sum of the light load weights shall be increased so that the sum of the light load weights shall be increased so that the sum of the light load weights for all the 4-star compartments shall be: — 3.5 kg/100 I of the total volume of all 4- and 3-star compartments shall be: — 3.5 kg/100 I of the total volume of all 4- and 3-star compartment shall be: 2 Storage conditions and target temperatures per compartment for which 3.5 kg/100 leads to a valid lower than 2 kg. 2 Storage conditions and target temperatures per compartment type: Table 3 sets out the storage conditions and target temperatures in each compartment type. 	 -a set of steady state power consumption values (Pss) in W and rounded to one decimal place, each at a specific ambient temperature and at a set of compartment temperatures, which are not necessarily the target temperatures; 		Р	
	-the representative incremental defrost and recovery energy consumption (ΔEd-f), in Wh and rounded to one decimal place, for products with one or more auto-defrost systems (each with its own defrost control cycle) measured at an ambient temperature of 16 °C (ΔEd-f16) and 32 °C (ΔEd-f32);		N/A	
	-defrost interval (td-f), expressed in h and rounded to three decimal places, for products with one or more defrost systems (each with its own defrost control cycle) measured at an ambient temperature of 16°C (td-f16) and 32°C (td-f32), td-f shall be determined for each system under a certain range of conditions;		N/A	
	-for each test performed the Pss and \triangle \to d-f are added together to form a daily energy consumption at a certain ambient temperature ET = 0,001 \times 24 \times (Pss + \triangle \to d-f/td-f), expressed in kWh/24h, specific to the settings applied;		P	
	-Eaux, expressed in kWh/a and rounded to three decimal places, Eaux is limited to the ambient controlled anti-condensation heater and is determined from the heater's power consumption at a number of ambient temperature and humidity conditions, multiplied with the probability that this ambient temperature and humidity condition occurs and summed; this result is subsequently multiplied with a loss factor to account for heat leakage into the compartment and its subsequent removal by the refrigeration system,		N/A	
	Each of these parameters shall be determined through a separate test or set of tests, Measurement data is averaged over a test period which is taken after the appliance has been in operation for a certain time, To improve the efficiency and accuracy of testing, the length of the test period shall not be fixed; it shall be such that the appliance is in steady state condition during this test period, This is validated by examining all data within this test period against a set of stability criteria and whether enough data could be collected in this steady state,		N/A	
	AE, expressed in kWh/a and rounded to two decimal places, shall be calculated as follows: $AE = 365 \times E_{daily}/L + E_{aux}$	See summary result	Р	
	-the load factor L = 0,9 for refrigerating appliances with only frozen compartments and L = 1,0 for all other appliances; and		Р	

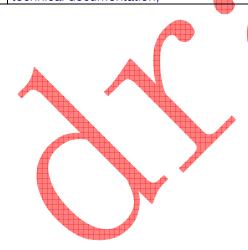

Page 9 of 28 Report No.: GZEE250700370731

	COMMISSION DELEGATED REGULATION	Report No.: GZEE250 N (EU) No 2019/2016	700370731
Cl	Requirement-Test	Result-Remark	Verdict
<u> </u>	-with Edaily, expressed in kWh/24h and rounded to three decimal places calculated from ET at an ambient temperature of 16 $^{\circ}$ C (E16) and at an ambient temperature of 32 $^{\circ}$ C (E32) as follows: $E_{daily} = 0.5 \times (E_{16} + E_{32})$ where E16 and E32 are derived by interpolation of the energy test at the target temperatures set out in Table 3,		P
(b)	For low noise refrigerating appliances:		N/A
	The energy consumption shall be determined as provided for in point 3(a), but at an ambient temperature of 25 °C instead of at 16 °C and 32 °C,		N/A
	Edaily, expressed in kWh/24h and rounded to three decimal places for the calculation of the AE is then as follows: $E_{daily} = E_{25}$ where E25 is ET at an ambient temperature of		N/A
	25 °C and derived by interpolation of the energy tests at the target temperatures listed in Table 3,		N/A
4	Determination of the standard annual energy consumption (SAE):		Р
(a)	For all refrigerating appliances:		Р
	SAE, expressed in kWh/a, and rounded to two decimal places, is calculated as follows: $SAE = C \times D \times \sum_{c=1}^{n} A_c \times B_c \times [V_c/V] \times (N_c + V \times r_c \times M_c)$		Р
	When carrying out the calculations above, for the variable temperature compartments, the compartment type with the lowest target temperature for which it is declared suitable is chosen,		Р
(b)	Modelling parameters per compartment type for the calculation of SAE:		Р
	The modelling parameters are set out in Table 4,		Р
	The values of the modelling parameters per compartment type		Р
(c)	Compensation factors per compartment type in the calculation of SAE:	See summary result	Р
	The compensation factors are set out in Table 5,		Р
5	Determination of the EEI:		Р
	EEI, expressed in % and rounded to the first decimal place, calculated as:	See summary result	Р
ANINUTY	EEI = AE/SAE.

COMMISSION REGULATION (EU) No 2019/2019 CI. Result-Remark Verdict Requirement-Test Annex II Ecodesign requirements Energy efficiency requirements: P From 1 March 2021, the energy efficiency index (a) (EEI) of refrigerating appliances shall not be above the values as set out in Table 1. EEI dedicated low noise refrigerating appliances with fresh food compartment(s) 375 low noise refrigerating appliances with transparent doors 380 other low noise refrigerating appliances, with the exception of low noise combi appliances with a frozen compartment wine storage appliances with transparent doors 190 other wine storage appliances 155 all other refrigerating appliances, with the exception of low noise combi appliances with 125 a frozen compartment (b) From 1 March 2024, the EEI of refrigerating appliances shall not be above the values set out in Table 2. Р dedicated low noise refrigerating appliances with fresh food compartment(s) 312 low noise refrigerating appliances with transparent door(s) 300 other low noise refrigerating appliances, with the exception of low noise combi appliances 250 with a frozen compartment wine storage appliances with transparent door(s) 172 other wine storage appliances 140 all other refrigerating appliances, with the exception of low noise combi appliances with a frozen compartment Functional requirements: 2 From 1 March 2021, refrigerating appliances shall meet the following requirements: P (a) Any fast freeze facility, or any similar function N/A achieved through modification of the temperature settings in freezer compartments, shall, once activated by the end-user according to the manufacturer's, the importer's or authorised representative's instructions, automatically revert to the previous normal storage conditions after no more than 72 hours, (b) Winter settings shall be automatically activated N/A or de-activated according to the need to maintain the frozen compartment(s) at the correct temperature,

Page 12 of 28 Report No.: GZEE250700370731

	COMMISSION REGULATION (EU)	No 2019/2019	0070007070
CI,	Requirement-Test	Result-Remark	Verdict
	(c)Each compartment shall be marked with the appropriate identification symbol, For the frozen compartments this shall be the number of stars of the compartment, For the chill and unfrozen compartments, this shall be an indication, chosen by the manufacturer, the importer or authorised representative, of the type of food that should be stored in the compartment,		Р
	(d)If the refrigerating appliance contains vacuum insulation panels, the refrigerating appliance shall be labelled with the letters 'VIP' in a clearly visible and readable way,		N/A
	(e)For 2-star sub-compartments or 2-star sections:		N/A
	-a 2-star sub-compartment or 2-star section is separated from the 3-star or 4-star volume by a partition, container, or similar construction;		N/A
	-the volume of the 2-star sub-compartment or 2-star section does not exceed 20 % of the total volume of the containing compartment,		N/A
	(f)For 4-star compartments, the freezing time to bring the temperature of the light load from +25 to 18 °C at an ambient temperature of 25 °C shall be such that the resulting freezing capacity complies with the requirement in Article 2, point 22.		N/A
	Until 1 March 2024, the requirements laid down in points 2(a) and (b) shall not apply to combine appliances with one electromechanical thermostate and one compressor which are not equipped with an electronic control board,		N/A
3	Resource efficiency requirements:	Declared by manufacturer	_
	From 1 March 2021, refrigerating appliances shall meet the following requirements:		_
(a)	Availability of spare parts:		_
	(1) manufacturers, importers or authorised representatives of refrigerating appliances shall make available to professional repairers at least the following spare parts: thermostats, temperature sensors, printed circuit boards and light sources, for a minimum period of seven years after placing the last unit of the model on the market;		Р
	(2) manufacturers, importers or authorised representatives of refrigerating appliances shall make available to professional repairers and endusers at least the following spare parts: door handles, door hinges, trays and baskets for a minimum period of seven years and door gaskets for a minimum period of 10 year, after placing the last unit of the model on the market;		P
	(3) manufacturers shall ensure that these spare parts can be replaced with the use of commonly available tools and without permanent damage to the appliance;		P

Page 13 of 28 Report No.: GZEE250700370731

Page 13 of 28 Report No.: GZEE2507003707 COMMISSION REGULATION (EU) No 2019/2019			
CI,	Requirement-Test	Result-Remark	Verdict
	(4) the list of spare parts concerned by point (1) and the procedure for ordering them shall be publicly available on the free access website of the manufacturer, importer or authorised representative, at the latest two years after the placing on the market of the first unit of a model and until the end of the period of availability of these spare parts;		P
	(5) the list of spare parts concerned by point (2) and the procedure for ordering them and the repair instructions shall be publicly available on the manufacturer's, the importer's or authorised representative's free access website, at the moment of the placing on the market of the first unit of a model and until the end of the period of availability of these spare parts,		Р
(b)	Access to repair and maintenance information:		P
	After a period of two years after the placing on the market of the first unit of a model or of an equivalent model, and until the end of the period mentioned under (a), the manufacturer, importer or authorised representative shall provide access to the appliance repair and maintenance information to professional repairers in the following conditions:		Р
	(1) the manufacturer's, importer's or authorised representative's website shall indicate the process for professional repairers to register for access to information; to accept such a request, manufacturers, importers or authorised representative may require the professional repairer to demonstrate that		P
	(i)the professional repairer has the technical competence to repair refrigerating appliances and complies with the applicable regulations for repairers of electrical equipment in the Member States where it operates, Reference to an official registration system as professional repairer, where such system exists in the Member States concerned, shall be accepted as proof of compliance with this point;		P
	(ii)the professional repairer is covered by insurance covering liabilities resulting from its activity, regardless of whether this is required by the Member State;		Р
	(2) the manufacturers, importers or authorised representatives shall accept or refuse the registration within 5 working days from the date of request by the professional repairer;		Р
	(3) manufacturers, importers or authorised representatives may charge reasonable and proportionate fees for access to the repair and maintenance information or for receiving regular updates, A fee is reasonable if it does not discourage access by failing to take into account the extent to which the professional repairer uses the information;		P

Page 14 of 28 Report No.: GZEE250700370731

	COMMISSION REGULATION (EU)	No 2019/2019	
CI,	Requirement-Test	Result-Remark	Verdict
	Once registered, a professional repairer shall have access, within one working day after requesting it, to the requested repair and maintenance information, The available repair and maintenance information shall include:		Р
	—the unequivocal appliance identification; — a disassembly map or exploded view; —list of necessary repair and test equipment; —component and diagnosis information (such as minimum and maximum theoretical values for measurements); —wiring and connection diagrams; —diagnostic fault and error codes (including manufacturer-specific codes, where applicable); and —data records of reported failure incidents stored on the refrigerating appliance (where applicable).		P
	(c) Maximum delivery time of spare parts:		Р
	(1) during the period mentioned under point 3(a)(1) and point 3(a)(2), the manufacturer, importer or authorised representatives shall ensure the delivery of the spare parts for refrigerating appliances within 15 working days after having received the order;	A SECONDARY OF THE PROPERTY OF	Р
	(2) in the case of spare parts available only to professional repairers this availability may be limited to professional repairers registered in accordance with point b,		Р
	(d)Requirements for dismantling for material recovery and recycling while avoiding pollution:		Р
	(1) manufacturers, importers or authorised representatives shall ensure that refrigerating appliances are designed in such a way that the materials and components referred to in Annex VII to Directive 2012/19/EU can be removed with the use of commonly available tools;		P
	(2) manufacturers, importers and authorised representatives shall fulfil the obligations laid down in Point 1 of Article 15 of Directive 2012/19/EU,		Р
4	Information requirements:		Р
	From 1 March 2021, instruction manuals for installers and end-users, and free access website of manufacturers, importers or authorised representatives shall include the following information:		P
	(a) the combination of drawers, baskets and shelves that result in the most efficient use of energy for the refrigerating appliance		Р
	(b)clear guidance about where and how to store foodstuffs in a refrigerating appliance for best preservation over the longest period, to avoid food waste;		Р
	(c)the recommended setting of temperatures in each compartment for optimum food preservation, These settings shall not contradict the storage conditions set out in Annex III, Table 3;		Р

Page 15 of 28 Report No.: GZEE250700370731

	COMMISSION REGULATION (EU)	No 2019/2019	77 0007 07 0
CI,	Requirement-Test	Result-Remark	Verdict
	(d)an estimation of the impact of temperature settings on food waste;		Р
	(e)a description of the effects of special modes and features, and in particular how temperatures are affected in each compartment and for how long;		Р
	(f)for wine storage appliances: 'this appliance is intended to be used exclusively for the storage of wine', This shall not apply to refrigerating appliances that are not specifically designed for wine storage but may be used for this purpose, or to refrigerating appliances that have a wine storage compartment combined with any other compartment type;		N/A
	(g)instructions for the correct installation and end- user maintenance, including cleaning, of the refrigerating appliance;		Р
	(h)for a freestanding appliance: 'this refrigerating appliance is not intended to be used as a built-in appliance';		Р
	(i)for appliances without a 4-star compartment: this refrigerating appliance is not suitable for freezing foodstuffs';		Р
	(j)access to professional repair, such as internet webpages, addresses, contact details;		Р
	(k)relevant information for ordering spare parts, directly or through other channels provided by the manufacturer, importer or authorised representative;		Р
	(I)the minimum period during which spare parts, necessary for the repair of the appliance, are available;		Р
	(m)the minimum duration of the guarantee of the refrigerating appliance offered by the manufacturer, importer or authorised representative;		Р
	(n)for refrigerating appliances with climate class:		Р
	(O)instruction on how to find the model information in the product database, as defined in Regulation (EU) 2019/2016 by means of a weblink that links to the model information as stored in the product database or a link to the product database and information on how to find the model identifier on the product,		P

Table 4

The values of the modelling parameters per compartment type

Compartment type	r _e (*)	Ne	M_{ϵ}	С			
Pantry	0,35						
Wine storage	0,60	Ī	0.12				
Cellar	0,60	75	0,12				
Fresh food	1,00	1		between 1,15 and 1,56 for comb			
Chill	1,10	138	0,12	appliances with 3- or 4-star com-			
0-star & ice-making	1,20			partments (°), 1,15 for other combi appliances, 1,00 for other			
1-star	1,50	1		refrigerating appliances			
2-star	1,80	138	0,15				
3-star	2,10						
Freezer (4-star)	2,10	1					

⁽a) $r_c = (T_a - T_c)/20$; with $T_a = 24$ °C and T_c with values as set out in Table 3.
(b) C for combi appliances with 3- or 4-star compartments is determined as follows: where frzf is the 3- or 4-star compartment volume V_{fr} as a fraction of V with frzf = V_{fr}/V :

⁻ if $frzf \le 0.3$ then $C = 1.3 + 0.87 \times frzf$; - else if 0.3 < frzf < 0.7 then $C = 1.87 - 1.0275 \times frzf$; - else C = 1.15.

Table 5

The values of the compensation factors per compartment type

Compartment type		Ac		Bc		D			
	Manual defrost	Auto-defrost	Freestanding appliance	Built-in appliance	≤ 2 (*)	3 (*)	4 (°)	> 4 (*)	
Pantry									
Wine storage		1,00		1,02		1,02	1,035	1,05	
Cellar	1								
Fresh food									
Chill				1,03	1,00				
0-star & ice-making			1,00		1,00	1,02	1,055	1,05	
1-star									
2-star	1,00	1,10		1,05					
3-star									
Freezer (4-star)									

^(*) number of external doors or compartments, whichever is lowest.

Summary Test Results						
Item	Rated value	Measure value	Verdict			
Total volume (L)	40	40,4	Р			
Wine storage compartment (L)	-	-	N/A			
Temperature rise time (h)		_	N/A			
Internal humidity of wine storage appliances (%)		-	N/A			
Freezing capacity (kg/24h)	-	-	N/A			
Energy consumption E16 (kWh/24h)	0,042	0,036	Р			
Energy consumption E32 (kWh/24h)	0,374	0,297	Р			
Annual energy consumption for ambient controlled anti-condensation heaters, Eaux, (kWh)	_	_	N/A			
Annual energy consumption (kWh/a)	76	60,96	Р			
Standard annul energy consumption, SAE, (kWh/a)	76,68	77,45	Р			
Energy efficiency index, (EEI)	99,1	78,7	Р			
Energy efficiency class	Е	D	Р			
Airborne acoustical noise emissions (dB(A) re 1pW)	35	33,07	Р			
Airborne acoustical noise emission class	В	В	Р			

Report No.: GZEE250700370731

'Table 1

Energy efficiency classes of refrigerating appliances

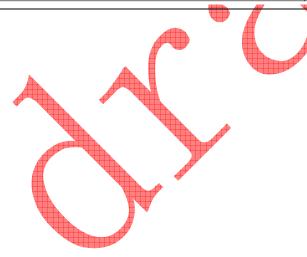

Energy efficiency class	Energy efficiency index (EEI)		
A	EEI ≤ 41		
В	41 < EEI ≤ 51		
С	51 < EEI ≤ 64		
D	64 < EEI ≤ 80		
E	80 < EEI ≤ 100		
F	100 < EEI ≤ 125		
G	EEI > 125'		

The noise emission class

Airborne acoustical noise emission classes

Airborne acoustical noise emission	Airborne acoustical noise emission class		
< 30 dB(A) re 1 pW	A		
≥ 30 dB(A) re 1 pW and < 36 dB(A) re 1 pW	В		
≥ 36 dB(A) re 1 pW and < 42 dB(A) re 1 pW	С		
≥ 42 dB(A) re 1 pW	D
